INTRODUCTION: The construction industry is changing rapidly, and new materials and technologies are being introduced on a regular basis for housing & infrastructure projects. Execution of construction projects and their timely delivery has become a prime concern, in view of the buyer's agitation on delay in construction. Especially after RERA, which emphasises the need for timely completion of projects, adoption of modern technologies has become the need of the hour. Rising industrial, residential and commercial growth is driving demand for faster construction and world-class quality. It has become imperative to use newer products and technologies to meet this increasing demand.

The construction industry in India is at the cusp of innovative change with new materials, building technology, software, digitization and artificial intelligence changing the way we conceptualize, build, and use our buildings. After continuously exploring new technologies that improve the quality, strength and safety of the buildings. In metro cities, few have started using self-climbing formwork, aluminum shuttering, precast concrete techniques and drywall systems. These technologies are not only cost-effective, but offer advantages such as minimal labour required, higher earthquake resistance, more durability, larger carpet area, smooth finish on walls, and lower maintenance. Such technologies not only reduce the turnaround time but also improve the quality and durability of construction, and help in generating more interest in affordable housing projects.

In line with this continuing endeavour, ICI-Bengaluru Centre is organising a one-day national seminar titled “NEW AGE CONCRETES FOR HOUSING AND INFRASTRUCTURE PROJECTS” on Friday, 22nd July 2022 at B.I.T, Bengaluru. Get to know from the experts and hands-on-training with professionals on vital aspects. We look forward to meeting you at this seminar for a wonderful interaction with the professional and mutual skill development.
